Data Centers

Reliability, security and performance guaranteed.

We have placed top-tier, ISO certified data centers at strategic locations across the globe to ensure prime access to the major business areas in Europe, the U.S. and Asia. Each one is designed to the highest specifications for performance, reliability and security.

Our state-of-the-art data centers use the latest technology to guarantee powerful performance and availability.

They're reliable too. We've built in multiple levels of redundancy to ensure consistently high performance, including redundant components and multiple active paths for cooling and power distribution. If any one of the data centers suffers power loss, emergency backup generators are ready to kick in to maintain continuity of service.

And, of course, they are secure. When it comes to sensitive business data, we can't afford to take any chances. Fully compliant with the latest security policies and audit guidelines, we take a meticulous approach ensuring that your private data stays private, and is protected at all times.

The Platform of Choice

A great platform isn't about the sum of its parts. It's about how those parts work together: how dedicated servers interact with the cloud; how data centers connect to our network; how you configure and deploy infrastructure on-demand.
